

Smart Sensor Technology

With resident-centered service in mind, Eskaton Villages and Lodges are outfitted with smart sensor technology. This state-of-the-art system enhances the care team's ability to respond proactively and quickly. Smart sensor technology augments the emergency pull cord systems required by the State of California, which can fail and are installed in bathrooms and bedrooms only.

How smart sensor technology works:

- Smart sensors, strategically placed in each apartment, quietly learn residents' normal activity pattern and generate notifications when changes occur.
- The system notifies staff of changes, such as increased or decreased activity patterns, that could indicate an emerging health concern like sleeplessness or a fall.
- Depending on the urgency of the alert, the team can respond with an immediate wellness check or by proactively checking in to prevent more serious issues.
